Carbon Reduction Plan

Supplier name: Affinus Limited

Publication date: 30th January 2026

Commitment to achieving Net Zero

Affinus Limited is committed to achieving Net Zero emissions by 2050

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2025	
Additional Details relating to the Baseline Emissions calculations.	
2025 is Affinus Limited first year for collecting and reporting Carbon Emissions data.	
Baseline year emissions:	
EMISSIONS	**TOTAL (tCO_2e)**
Scope 1	**1.164**
Scope 2	**0.926**
Scope 3 (Included Sources)	**249.075**
Total Emissions	**251.165**

Current Emissions Reporting

Reporting Year: 2025

EMISSIONS	TOTAL (tCO_2e)
Scope 1	1.164
Scope 2	0.926
Scope 3 (Included Sources)	249.075
Total Emissions	251.165

Emissions reduction targets

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will decrease over the next five years to 212.666tCO_2e by 2035. This is a reduction of 15%

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

At Affinus Limited our approach to reducing carbon emissions is shaped by the nature of our business and our current emissions profile. We have started our journey by employing technology to track and report emissions.

Our 2025 baseline total carbon footprint is 251.165 tCO_2e, with the overwhelming majority of emissions arising from Scope 3 included sources (249.075 tCO_2e) rather than from direct fuel use, energy-intensive premises, or company-owned fleet activity. Scope 1 and Scope 2 emissions together account for just 2.090 tCO_2e, reflecting the nature of Affinus as a predominantly service-led organisation with limited direct operational emissions. As a result, our pathway to Net Zero by 2050 is necessarily focused on addressing indirect emissions

through proportionate, evidence-based interventions that align with where we can exert the greatest influence.

Future carbon reduction initiatives

In the future we hope to implement further measures such as:

- Implement a responsible procurement and supplier engagement programme, focusing on high-emission suppliers, requesting carbon data and Net Zero commitments, and favouring lower-carbon alternatives at contract renewal to drive Scope 3 reductions over time.

- Undertake a cloud, hosting and digital services optimisation project to consolidate platforms, reduce unused capacity, select lower-carbon regions, and work with providers that have credible renewable energy commitments.

- Introduce a business travel and remote-delivery optimisation policy, embedding virtual-first delivery, setting approval thresholds for flights, encouraging rail over air, and reducing avoidable travel-related emissions.

- Formalise flexible, hybrid and remote working through a commuting and home-working emissions reduction initiative, supported by incentives for public transport, cycling, and reduced commuting days.

- Deliver an internal demand-reduction programme to minimise purchased goods and services, extend IT equipment lifecycles, encourage reuse, and reduce consumables and waste.

- Improve emissions measurement through a carbon-aware financial and data tracking project, enabling more accurate Scope 3 reporting and targeted reduction actions year on year.

- Establish a Net Zero governance and decision-making framework that embeds carbon considerations into senior approvals, supplier selection, and annual planning to ensure sustained emissions reduction.

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard[1] and uses the appropriate Government emission conversion factors for greenhouse gas company reporting[2].

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard[3].

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

Simon Poulter
